Methamphetamine Chemicals NOS
Carbon Monoxide

Number of Victims: 1

Types of Injuries Sustained:

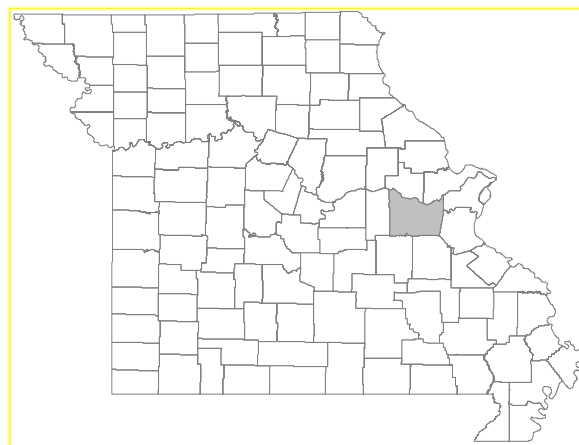

Burns not chemical related

Injury Outcomes:

Death on the scene

Number of Events with Evacuations: 2

Number of People Evacuated: 15

Interesting Events:

A man was trapped inside his bedroom in the back of the house when a fire broke out due to an active methamphetamine lab. Firefighters got him out but could not revive him.

Volunteer workers noticed an odor in the building upon arrival to open the center. Firefighters checked the building with monitoring equipment and found high levels of carbon monoxide. The volunteers and the six people from the upstairs apartments were evacuated. The cause of the release was a crack in the heat exchanger on an LP furnace. There were no injuries reported but victims were transported to a medical facility for observations.
